## DETAILED ACTION

### *Information Disclosure Statement*

The information disclosure statement (IDS) submitted on April 20, 2007 was considered by the examiner.

### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-13 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 7-23 of U.S. Patent No. 7,311,398 in view of Okada et al or Stoner (US 5,182,585), of record. Although the conflicting claims

are not identical, they are not patentably distinct from each other because the variable focus lens structure of claims 1 and 7-23 of US Patent 7,311,398 is not specifically included in a spectacle lens system. Okada et al teaches it is well known to use a (different) liquid crystal lens system in a spectacle arrangement for vision correction. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the variable focus lens structure of claims 1 and 7-23 of US Patent 7,311,398 in a spectacle lens, since as taught by Okada et al these types of fluid lenses are used in a spectacle lens and doing so would have provided predictable results. Note, for example, the two fluids can have substantially identical specific gravity (('398), claim 15); an oil and an electrolyte can be used as first as second fluids (('398), claim 17); the electrolyte can be a salt/water mixture (('398), claim 20) and so forth. Okada et al teaches that there can be a variable resistor (60) for adjustment means. Stoner is cited to show it is well known to use a sensing and range finding system (Fig. 5) in a fluid type spectacle lens system. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the sensing and range finding system of the spectacle system Stoner in the variable lens of claims 1 and 7-23 of US Patent 7,311,398, since this would have yielded predictable results.

Claim 14 is rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 7-10 of U.S. Patent No. 7,311,398. Although the conflicting claims are not identical, they are not patentably distinct from

Art Unit: 2873

each other because the variable focus lens of claims 1 and 7-10 of US Patent No. 7,311,398 also includes limitations that are not required by claim 14 (such as biocompatible material, for example).
